General Description

The DPA-10-20-H is a universal distribution amplifier capable of distributing frequency, squarewave, pulses or time code signals all in one 19" rack mount 1U device. It has two inputs that can be configured as one input with twelve outputs or two inputs each with six outputs.

Full monitoring and control is achieved via an Ethernet interface. An embedded web page can be used to monitor and control the unit from anywhere in the world. Alternatively, free console software is supplied.

Options

Various options are available. If the option you require is not shown, just email us your requirements and we will advise whether it can be designed.

- Option 02: G703 compliant outputs. Outputs levels are -1.2V to +1.2V into a 75 Ω load.
- Option 03: Internal DDS, 0-80 MHz in 1 μ Hz steps. Adjusted by RS232. This option is usually fitted with option 02 to give 2.048 MHz G703 outputs from a 10 MHz input.

Miscellaneous Information

The DPA-10-20-H is a highly reliable unit with an MTBF of over 60 years. The DPA-10-20-H is housed in a fully screened 19" rack mount case and operates from a 100 - 240 VAC supply (usable 90 – 260 VAC) or external 12 V DC. The DPA-10-20-H is CE marked for sale within the EEC.
